The 800-HPR Series II truck jet features the patented telescoping/rotating hose reel enclosed in a heated rear compartment.

Power Plant - Our quality starts with the triplex pump, powerful hydraulic system, and the pre-painted power plant sub assembly.

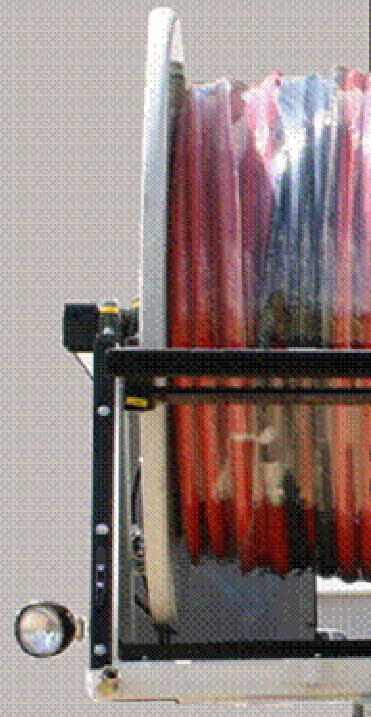

One Piece Shroud protects the pump & hydraulically extendable and rotating hose reel. The shroud is available in corrosion resistant Aluminum or Painted Steel. The shroud and all Series II sub-assemblies are pre-painted before assembly to assure the maximum corrosion resistance.

Heated Rear Compartment uses an 80,000 BTU heater to keep components from freezing in cold climates.

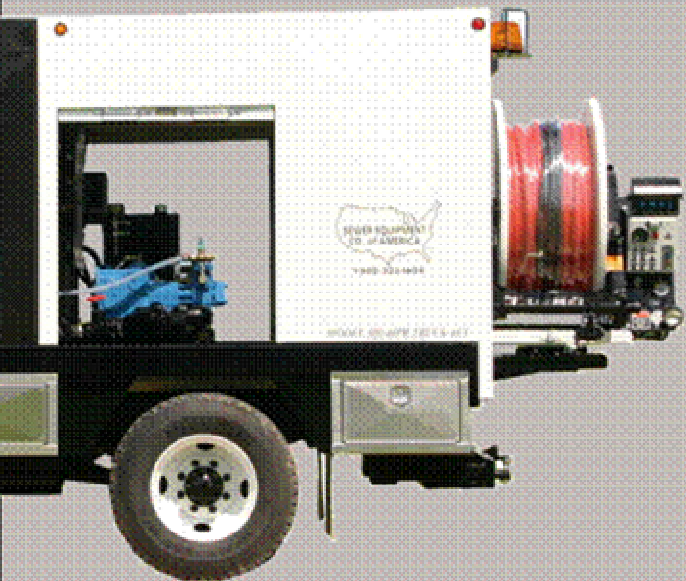

Duraprolene™ Water Tanks are comprised of two 750 gallon capacity tanks with $\frac{1}{2}$ " thick walls, and true top to bottom baffles that are repairable. The U.V. stabilized material will never rust or corrode, is flexible in nature and will not crack. The two tanks are designed with 8 baffled compartments each to eliminate any tank sloshing or distortion.

Smart Nozzle™ brand high efficiency nozzles are recommended for the best cleaning performance. One high flow nozzle and one chisel point nozzle are included.

Patented Telescoping/Rotating is stored in the heated rear compartment. The hose reel is also capable of hydraulically extending out of the truck. The new Ultra-Glide system features a high flow nozzle and a chisel point nozzle. The hose reel is also capable of being rotated. The Series II 800-HPRTV is now available with an optional hydraulically powered hose reel.

The Machine for all Seasons

Rolling Dual Hose Reel

 of 180 degree rotation.
 now available with an
 red rotating hose reel.

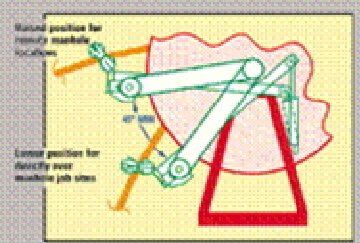

Roll Out Root Cutter Maintenance Box:
 This storage compartment for your hydraulic root cutting tools is a sealed, epoxy coated oil reservoir equipped with a hand or electric pump that forces hydraulic oil into the root cutter stored inside. This system will help you prolong the life of your root cutting tools

Watertight Controls
 are contained in a weatherproof NEMA 4 control box.

Smart Counter™ hose footage meter is accurate to +/- 1%. Its large 2 1/4" brightly lit red LED display makes the footage readout visible up to 150 feet away. The Smart Counter™ is housed in a water and dust proof IP65 case.

Automatic Level Wind with Up/Down Action and a Pendant Control allows for safe, clean, and hands-free hose operation away from traffic.
