### Hydraulic Rodding Machines

Hydraulic Operated Rodders are available as a trailer or truck mounted unit. These "easy-to-set-up" machines are available with manual or automatic controls (Auto-Reflex Drive). When outfitted with the Auto Reflex Drive, the machine gets "Smart". When a difficult obstruction is encountered the rod will back up a few feet and automatically travel forward again attacking the obstruction. This cycle will repeat itself until the problem is eliminated. This "Smart" rodder feature is of great assistance to both the new and experienced operator. All of the Rodder's electrical components are housed in a NEMA4 enclosure to insure protection from the elements.

**444 Sectional Rodder** - Positive Rod Drive is accomplished by five or more hardened steel drive dogs spaced between heavy duty steel chain. The cleaning action is provided by the tool located at the end of either 5/16" or 3/8" sectional rods.

**866 Continuous Rodder** - Positive Rod Drive is accomplished by six 4.75 inch rollers allowing for maximum thrust. Drive heads are free of grease fittings. All bearings are permanently sealed. The cleaning action is provided by the tool located at the end of the continuous rod.

### Truck Mounted Rodders

Our Rodders are also available in a truck mounted design. Choose between power take off (PTO) and auxiliary engines. Deluxe skirting, platforms, and tool boxes are optional. The optional operators cab for Truck Mounted Units is available to protect operators from the elements.

### Options

- Truck or Trailer Mounting
- Engine or PTO Drives
- Manual or Automatic Hydraulic Drives
- Single or Dual Lever Controls
- Auto-Reflex Drive
- Hydraulic Hold Down
- Accessory Packages
